On behalf of The Millennium Project, I have the pleasure to invite you to add your judgments in a global study on the future dynamics of work and technology.

Stephen Hawking, Elon Musk, and Bill Gates are warning the world about the potential dangers of artificial intelligence growing beyond human control. Whether AI does or does not, it is certain that it and other future technologies will have fundamental impacts on the nature of work and economics. The world needs a serious exploration about these matters and we seek to include your thinking in this global exploration.

Please go to https://themp.org/rtd/future_worktechnology_2050/; you will be asked to sign in with your email address. You will then get a message saying: "No user exists with the email address: <your email address> would you like to create an account?" Select yes (so that you can see your answers when you come back). You will then be asked several demographic questions on your first visit only. Then you will have access to the Real-Time Delphi questionnaire. Please answer only those questions you feel comfortable answering.

You will be invited to share your judgments about how future technology over the next 35 years (artificial narrow intelligence, artificial general intelligence, Internet of Things, robotics, synthetic biology, nanotechnology, 3D/4D printing, self-driving vehicles, drones, mobile/cloud, augmented reality/holography, etc.) could affect the future of work, and what should be done to create positive conditions.

You do not have to complete this questionnaire on one visit. To record your answers, please click "Submit" after each question you answer; this will also open a text box where you are invited to provide reasoning for your answers.

You can (and are encouraged to) revisit the questionnaire (signing in with your email address) as many times as you like, to see how other participants have responded. You are welcome to change your answers based on what you have read from other participants or based on your further reflection and research. You can edit your responses in any way you wish at any time. No attributions will be made; your answers will be anonymous, unless you put your name with the comments entered.

The results of this global assessment will be used to build alternative scenarios, roadmaps, and workshops around the world. Respondents to this Real-Time Delphi will be invited to participate in the next activities.

The Millennium Project is a global participatory think tank connecting 55 Nodes around the world that identify long-range challenges and strategies, and initiate and conduct foresight studies, workshops, symposiums, and advanced training. It produces the annual *State of the Future* reports, the *Futures Research Methodology* series, the *Global Futures Intelligence System*, and special studies.

A press release about this study is available at:

<http://www.prweb.com/releases/2015/04/prweb12672038.htm>

Best regards,

Jerome C. Glenn
Executive Director
